Audit team

The core audit team consisted of:
Kathrine Sibbald, Zoe McGuire, Chris Lewis, Chris Dorrian and Philip Keane, under the direction of Carol Calder.

Key messages

- 1** Integration Joint Boards (IJBs) face a complex landscape of unprecedented pressures, challenges and uncertainties. These are not easy to resolve and are worsening, despite a driven and committed workforce. The health inequality gap is widening, there is an increased demand for services and a growing level of unmet and more complex needs. There is also variability in how much choice and control people who use services feel they have, deepening challenges in sustaining the workforce, alongside increasing funding pressures.
- 2** We have not seen significant evidence of the shift in the balance of care from hospitals to the community intended by the creation of IJBs. They operate within complex governance systems that can make planning and decision making difficult. They cannot address the issues across the sector alone. Whole-system collaborative working is needed as part of a clear national strategy for health and social care that will promote improved outcomes across Scotland but reflects the need to respond to local priorities.
- 3** The workforce is under immense pressure reflecting the wider pressures in the health and social care system. Across the community health and social care sector there are difficulties in recruiting and retaining a skilled workforce. The Covid-19 pandemic, the cost-of-living crisis and the impact of the withdrawal from the European Union have deepened existing pressures. Unpaid carers are increasingly relied on as part of the system but are also disproportionately affected by the increased cost-of-living. Without significant changes in how services are

provided and organised, these issues will get worse as demand continues to increase and the workforce pool continues to contract.

- 4 Uncertainty around the direction of the plans for a National Care Service and continued instability of leadership in IJBs have also contributed to the difficult context for planning and delivering effective services. We are seeing examples of IJBs trying to work in new and different ways, but there is a lack of collaboration and systematic shared learning on improvement activities.
- 5 The financial outlook for IJBs continues to weaken with indications of more challenging times ahead.
 - In common with other public sector bodies, financial pressures arising from rising inflation, pay uplifts and Covid-19 legacy costs are making it difficult to sustain services at their current level and, collaborative, preventative and person-centred working is shrinking at a time when it is most needed.
 - The financial outlook makes it more important than ever that the budget process involves clear and open conversations with IJB partners, workforce, people who use services and other stakeholders around the difficult choices required to achieve financial sustainability.
 - Overall funding to IJBs in 2022/23 decreased by nine per cent in real terms or by one per cent in real terms once Covid-19 funding is excluded. The total reserves held by IJBs almost halved in 2022/23, largely due to the use and return of Covid-related reserves. The majority of IJBs reported notable savings, but these were largely arising on a non-recurring basis from unfilled vacancies.

- IJBs have had to achieve savings as part of their partner funding allocations for several years. The projected funding gap for 2023/24 has almost tripled, in comparison to the previous year, with over a third anticipated to be bridged by non-recurring savings, with a quarter of the gap bridged using reserves. This is not a sustainable approach to balancing budgets.
- 6** Data quality and availability is insufficient to fully assess the performance of IJBs and inform how to improve outcomes for people who use services with a lack also of joined up data sharing. However, available national indicators show a general decline in performance and outcomes.
- 7** Current commissioning and procurement practices are driven largely by budgets, competition, and cost rather than outcomes for people. They are not always delivering improved outcomes and are a risk for the sustainability of services. Improvement to commissioning and procurement arrangements has been slow to progress but is developing. There are some positive examples of where more ethical and collaborative commissioning models are being adopted.
-

Recommendations

This report and the recommendations focus on IJBs, however to respond to the significant and complex challenges in primary and community health and social care all the bodies involved need to work collaboratively on addressing the issues – IJBs alone cannot address the crisis in the sector. The next iteration of this annual report will be produced jointly with the Auditor General for Scotland and will take a whole system approach and will make recommendations to the Scottish Government, councils, NHS boards as well as IJBs, as appropriate.

Integration Joint Boards should:

- ensure that their Medium-Term Financial Plans are up to date and reflect all current known and foreseeable costs to reflect short and longer-term financial sustainability challenges
- ensure that the annual budgets and proposed savings are achievable and sustainable. The budget process should involve collaboration and clear conversations with IJB partners, workforce, people who use services and other stakeholders around the difficult choices required to achieve financial sustainability
- work collaboratively with other IJBs and partners to systematically share learning to identify and develop:
 - service redesign focused on early intervention and prevention
 - approaches focused on improving the recruitment and retention of the workforce
- work collaboratively with other IJBs and partners to understand what data is available and how it can be developed and used to fully understand and improve outcomes for those using IJB commissioned services. This should include a consideration of gaps in data. It should also include consideration of measures to understand the impact of preventative approaches
- evaluate whether the local commissioning of care and support services, and the contracting of these services, adheres to the ethical commissioning and procurement principles, improving outcomes for people.

1. Introduction

About this report

1. In [2022](#) and [2023](#) the Accounts Commission published a bulletin setting out the financial position of the 30 Scottish IJBs. This year's report expands on this and provides a high-level independent analysis of IJBs, commenting on:

- the financial performance of IJBs in 2022/23 and the financial outlook for IJBs in 2023/24 and beyond
- performance against national health and wellbeing outcomes and targets alongside other publicly available performance information
- a 'spotlight' focus on commissioning and procurement of social care.

2. This report focuses solely on IJBs. While it comments on how they interact and perform within the wider system, the work does not comment on the work of councils, NHS boards or the Scottish Government or make recommendations to these bodies. In future reports we will expand the scope to include these public bodies. This will allow us to consider community health and social care as a whole system and look at how different parts work together when planning and delivering services.

3. Supporting this report we have also published:

- a supplement collating the performance information considered in the report
- a checklist of questions, based on the issues raised in this report, for IJB board members to consider
- a summary of the discussion at a stakeholders' roundtable session we hosted in February 2024 that has helped inform this report.

What is an IJB?

4. An IJB is responsible for the governance, planning and resourcing of social care, primary and community healthcare and unscheduled hospital care for adults in its area.

5. The Public Bodies (Joint Working) (Scotland) Act 2014 (the Act) requires the 32 Scottish councils and 14 territorial NHS boards to work together in partnerships to integrate how social care and community healthcare services are provided. IJBs were created as part of the Act as separate legal bodies. [Exhibit 1 \(page 9\)](#) sets out how these IJBs operate.

6. There are 31 partnerships across Scotland. Stirling and Clackmannanshire councils have formed a single partnership with NHS Forth Valley. The majority of NHS boards have a partnership with more than one IJB and five IJBs cover the same geographical area as their health boards.

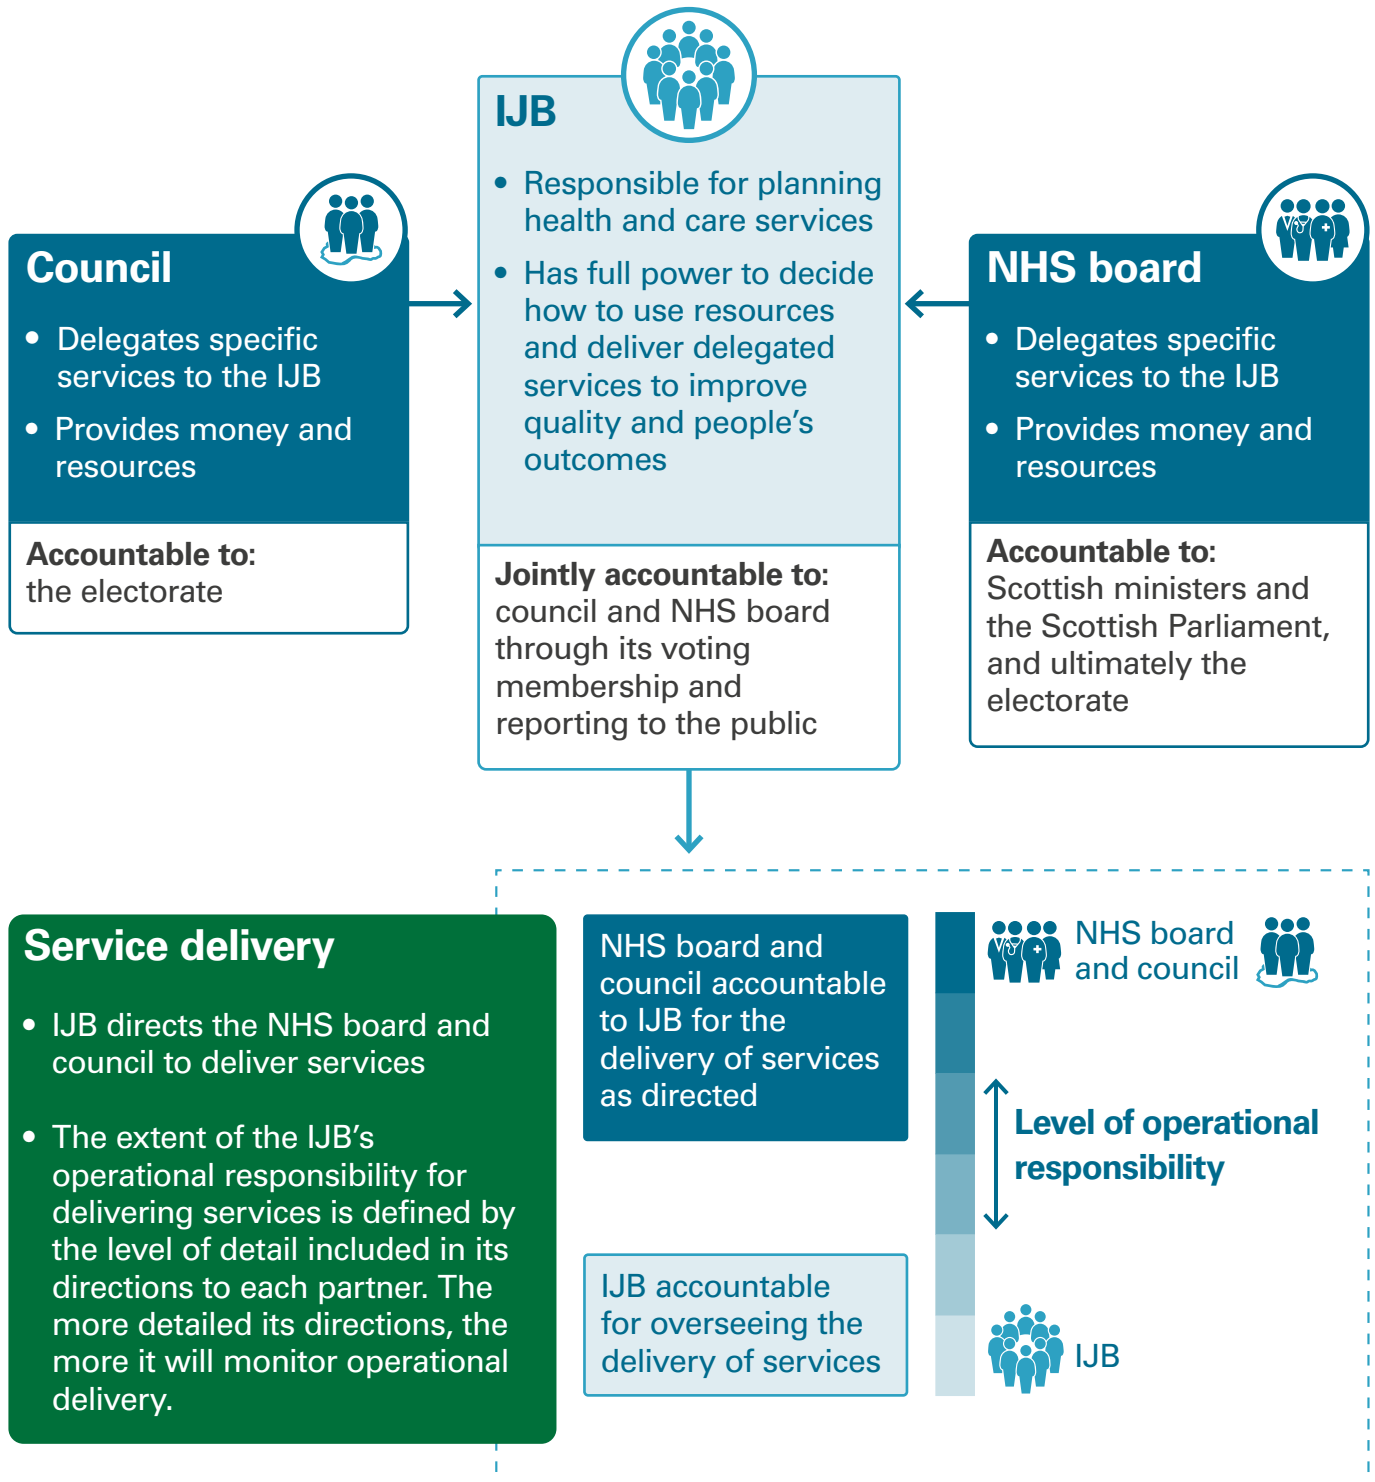

7. Highland follows a different arrangement, a Lead Agency model.¹ This Accounts Commission report focuses on the work of the IJBs and does not comment on the performance of the Highland Health and Social Care Partnership as its scrutiny sits with the Auditor General for Scotland rather than the Accounts Commission.

8. The aim of integration is to ensure that people receive the care they need at the right time and in the right setting, with a focus on community-based, preventative care; improving the outcomes for patients, people who use services, carers and their families. The services are provided by a mixture of public, private and third sector providers dependent on who is most suitable to deliver those services.

9. The Act sets out which services are required to be delegated by councils and NHS boards to the IJBs as a minimum. This includes social care and primary and community healthcare. Services within this scope include for example, services for adults with physical disabilities, mental health services, drug and alcohol services and unscheduled health care. Some IJBs have also integrated other services. For example, 11 IJBs also have strategic responsibility for children's social care services and 16 IJBs have strategic responsibility for criminal justice social work.

Exhibit 1.

How IJBs work

10. Audit Scotland has published reports and is currently undertaking work, on behalf of the Accounts Commission and the Auditor General for Scotland, on some of these service areas.

- [Adult mental health](#) Report published 13 September 2023.
- [Children and young people who need additional support for learning](#) Blog published 17 May 2022.
- [Drug and alcohol services: An update](#) Report published 8 March 2022 and [Drug and alcohol services – audit scope](#) Ongoing work to be published Autumn 2024.
- [Social care briefing](#) Report published 27 January 2022.
- [General Medical Services contract progress](#) Audit scope report to be published spring 2025.

2. The context

IJBs face a complex landscape of considerable challenges and uncertainties

11. Social care and primary and community healthcare services in Scotland currently face complex and unprecedented pressures and challenges. These challenges are not easily resolved and are worsening. There is an increased demand for services, deepening challenges in sustaining the workforce, alongside increasing financial pressures. These longstanding challenges have been exacerbated by the cost-of-living crisis, increasing cost of provision of services and a changing policy landscape. The Covid-19 pandemic has also had a lasting impact on this sector, given the impact on health and social care staff and the need to continue to protect vulnerable people.

12. [The Independent Review of Adult Social Care²](#) (Feeley Review) (published in February 2021), and the scrutiny of the [National Care Service \(Scotland\) Bill](#) has stimulated a lot of public debate and consideration of the need for change in the sector. But, to date there has been limited change for people experiencing or working in social care. It is important to emphasise that this is not a reflection on individuals working in the sector. Our experience, through this work, is that those involved, at all levels, are driven and passionate about improving the lives of people who need support.

13. IJBs cannot address the issues across the sector alone, whole-system collaborative working is needed as part of a clear national strategy. In the Auditor General for Scotland's [NHS in Scotland 2023](#) report, he stated that 'there are a range of strategies, plans and policies in place for the future delivery of healthcare, but no overall vision. To shift from recovery to reform, the Scottish Government needs to lead on the development of a clear national strategy for health and social care. It should include investment in preventative measures and put patients at the centre of future services'.

IJBs are facing significant financial sustainability challenges and cost pressures are only increasing

14. In common with other public sector bodies, financial pressures arising from rising inflation, pay uplifts, the cost-of-living crisis and Covid-19 legacy costs are making it difficult to sustain services at their current level. IJBs are also experiencing an increase in prescribing costs. IJBs have had to achieve savings as part of their partner funding allocations for several years and achieving these savings, while maintaining service levels, has become increasingly difficult. IJBs are now having to consider more significant options as statutory duties have to be prioritised. This

includes ending funding for some care and support services, to ensure financial sustainability in the medium to long term.

The demand and need for services continue to increase and become more complex

15. Demographic changes and the increasing complexity of care needed are driving an increase in the demand for services. For example, an estimated one in 25 people of all ages in Scotland received social care support and services at some point during 2022/23. It is estimated that 76 per cent of these people are aged 65 and over, and 63 per cent are aged 75 and over.³ An estimated 20 per cent of Scotland's population is aged over 65. In many rural and island areas this population group is even higher, for example 27 per cent of the population in Argyll and Bute and the Western Isles are over 65.⁴

16. The proportion of the population over the age of 65 is projected to grow by nearly a third by mid-2045. Since currently around three-quarters of people receiving social care support are aged 65 or over, this means that there will likely be a substantial rise in the number of people requiring social care support. It is likely this pattern reflects the challenges across most other services commissioned by IJBs. A recent study found that 93 per cent of people aged over 65 who received social care had two or more medical conditions simultaneously.⁵ People over 75 are around twice as likely to require outpatient or inpatient care compared to those aged in their mid-20s.⁶

The workforce is under immense pressure

17. Across the primary and community health and social care sector there are difficulties in recruiting and retaining a skilled workforce. Without significant changes in how services are provided and organised, this issue will get worse as demand continues to increase and the workforce pool continues to contract. The number of people aged 25-44 is predicted to fall from 1.4 million to 1.3 million by 2045. Meanwhile the number of people aged over 75 will rise from 469,000 in 2021 to 774,000 in 2045.⁷

18. We have previously highlighted how the [effects of the pandemic](#) worsened existing pressures on the social care workforce causing experienced staff to leave their posts. Our ongoing monitoring and discussions with stakeholders show that these issues remain and the cost-of-living crisis and the ongoing impact of withdrawal from the European Union have added to the pressures.

19. The staff vacancy rates across social care and support services in Scotland is high. At 31 December 2022, 49 per cent of services reported vacancies; 63 per cent of these services with vacancies reported problems filling them. The percentage of care services reporting vacancies had been consistent over time up to and including 2020, before a large increase of 11 percentage points reported in 2021.⁸

20. Almost 90 per cent of social care providers stated recruitment and retention was problematic for them in a survey carried out by Scottish Care.⁹ This survey also found that a quarter of staff leave an organisation within the first three months of joining. Providers find they are competing for staff:

- across other public, independent and third sector providers with differences in pay and terms and conditions
- with the hospitality and retail sectors, who pay more for less demanding roles
- with the health sector with an increasing disparity between health sector and social care sector wages – the current pay gap is 19 per cent between adult social care workers and NHS entry level pay.

The cost-of-living crisis is affecting the demand for services as well as the ability to provide them

21. The increased costs of living have exacerbated the workforce challenges as the low wages are making it a less favourable career choice. This is particularly an issue for those providing care at home services who are experiencing an increase in petrol costs and are not always reimbursed in a timely manner, or, in some cases, at all for all their journeys.

22. Unpaid carers are also disproportionately affected by the increased cost-of-living crisis. People in the most deprived areas are more likely to provide 50 or more hours of unpaid care a week compared to people living in the least deprived areas.¹⁰

23. The cost of provision of services has also increased. Homecare costs per hour have increased by 19 per cent between 2016/17 and 2022/23. Residential care costs per week (for those aged 65 and over) have increased by 23 per cent between 2016/17 and 2022/23. There are also significant cost differences between urban and rural areas.¹¹

24. In particular, for smaller, independent and third sector service providers, increased costs are causing problems for the sustainability of services. For example, in residential care homes, an increase in fuel costs to heat and provide power for residents has made their financial viability increasingly challenging.

IJBs operate within complex governance systems that can make planning and decision making difficult

25. We previously reported in our [Health and social care integration: update of progress](#) report, that the current model of governance is complicated, with decisions made at IJB, council and health board level. We found that cultural differences between partner organisations are a barrier to achieving collaborative working and achieving key priorities. These challenges have not been resolved.

An unpaid carer is anyone who cares for someone who is ill, disabled, older, has mental health concerns or is experiencing addiction and is not paid by a company or council to do this. Primarily, this is a family member or friend.

Instability of leadership continues to be a challenge for IJBs

26. A notable turnover of senior leadership positions since the start of health and social care integration continues to be a concern. Half of all IJBs experienced turnover in either their chief officer and/or chief finance officer posts in the last two years. Across 2021/22 and 2022/23, seven Chief Officers, 11 Chief Financial Officers, one IJB chair and one chief social work officer changed. Instability in leadership teams has the potential to disrupt strategic planning at a time when difficult and significant decisions need to be made. It can affect the culture of an organisation at a time when the workforce is under pressure.

Plans for a National Care Service have brought uncertainty for IJBs

27. In June 2022, the Scottish Government introduced the National Care Service (Scotland) Bill to Scottish Parliament. The Bill was intended to ensure:

- consistent delivery of high-quality social care support to every single person who needs it across Scotland, including better support for unpaid carers
- that care workers are respected and valued.

28. The main elements of the Bill were the proposed creation of a National Care Service, including a national board, making Scottish Ministers accountable for social work and social care support. The original Bill also set out to transfer social care and social work council functions, staff and assets to Scottish Ministers or local care boards. This put in question the role and responsibility of IJBs and caused uncertainty for IJBs on the timescales for implementing the proposed National Care Service and what form it would likely take. This has complicated IJBs ability to undertake medium- and long-term financial planning.

29. After some delays, Stage 1 of the Bill was passed in March 2024. Amendments planned for the NCS Bill now mean IJBs will be reformed rather than replaced by 2029/30. IJBs should therefore ensure they have effective medium- and longer-term planning in place and continue to drive improvements in how they commission and deliver services.

3. Financial performance

The financial health of IJBs continues to weaken and there are indications of more challenging times ahead

IJB funding has decreased in real terms compared to 2021/22

30. IJBs receive their funding as annually agreed contributions from their council and NHS board partners. Funding is largely received to cover in-year expenditure on providing services but can also be received for specific services and national initiatives to be funded in future years.

31. Funding to IJBs in 2022/23 decreased by £1.1 billion (nine per cent) in real terms to £11.0 billion; a £342 million decrease in cash terms [Exhibit 2](#). IJBs received £1.0 billion of additional funding in 2021/22 to support their response to the Covid-19 pandemic. Excluding the 2021/22 Covid-19 related funding, this shows an underlying decrease of £68 million in real terms, representing a 1.0 per cent decrease.

Exhibit 2. Real terms movement in IJB funding

Source: IJB audited annual accounts 2020/21, 2021/22 and 2022/23 and ONS deflators

Non-recurring savings, largely arising from unfilled vacancies, led to the majority of IJBs reporting a surplus on the cost of providing services

32. Nineteen IJBs reported a surplus on the cost of providing services, but these underspends were driven largely by vacancies and staff turnover ([Exhibit 3, page 17](#)). Three IJBs reported a break-even position and the remaining eight IJBs recorded an overspend of two per cent, or under, of their net cost of services. The three IJBs reporting a break-even position did so after receiving additional funding allocations from their partner bodies. The net underspend position on the costs of providing services across IJBs was £110 million.

33. The IJBs ability to meet the rising demand for their services and maintain service quality, is weakened by unfilled vacancies. The IJBs reporting a surplus would be unlikely to do so if the workforce was at full capacity.

The majority of the total planned savings were achieved, but over a third were achieved only on a one-off basis

34. IJBs achieved 84 per cent of their £77 million planned savings target in 2022/23. Over a third of this was achieved on a non-recurring basis. This means that these savings will be carried forward to be found again in future years. Identifying and achieving savings every year on a recurring basis, and moving away from relying on one-off savings, is essential for IJBs to maintain financial sustainability.

Total reserves held by IJBs have almost halved in 2022/23 due largely to the use or return of Covid-19 related reserves

35. By the end of 2022/23, all IJBs reported a reduction in their total level of reserves, decreasing by £560 million to £702 million, a 44 per cent reduction.

36. The decrease in the overall reserves balance was largely the result of a reduction in the reserves of funding that the Scottish Government specifically provided for the response to the Covid-19 pandemic. The Covid-19 related reserves decreased by 97 per cent, from £502 million to £14 million. Auditors confirmed that over two-thirds (£333 million) of the Covid-19 reserve reduction was a result of unused balances being returned to the Scottish Government.

Exhibit 3.

Operational surplus as a proportion of net cost of service

Source: IJB audited annual accounts 2022/23

37. The exceptional impact of Covid-19 reserve movements can obscure underlying reserve movements. When Covid-19 reserve movements are excluded, the total value of reserves was reduced by 10 per cent (£72 million) from £760 million to £687 million.

38. IJBs hold reserves for a variety of reasons, including reserves held to address specific local or national policy initiatives or to mitigate the financial impact of unforeseen circumstances. The reserves held by IJBs consisted largely of four main areas [\(Exhibit 4, page 19\)](#), as follows:

- Earmarked reserves of £426 million (£426 million in 2021/22) held by individual IJBs for a range of local planned purposes, such as reserves for multidisciplinary teams, interim care beds, as well as more generic reserves associated with winter planning and local reserves to support newer innovative practices that contribute towards strategic change.
- Ring-fenced reserves of £79 million (£185 million in 2021/22) provided to support Scottish Government national policy objectives. Examples include the Primary Care Improvement Fund, Mental Health Recovery and Renewal, Mental Health Action 15, Community Living Change Fund and Alcohol and Drug Partnership funding.
- Contingency reserves of £183 million (£148 million in 2021/22) that have not been earmarked for a specific purpose. IJBs have more flexibility on the use of this type of reserves which are often used to mitigate the financial impact of unforeseen circumstances.
- Covid-19 related reserves of £14 million (£502 million in 2021/22), representing all unspent funding received to support the impact of the pandemic on IJB services.

Exhibit 4.

2022/23 Reserves

Source: IJB audited annual accounts 2022/23

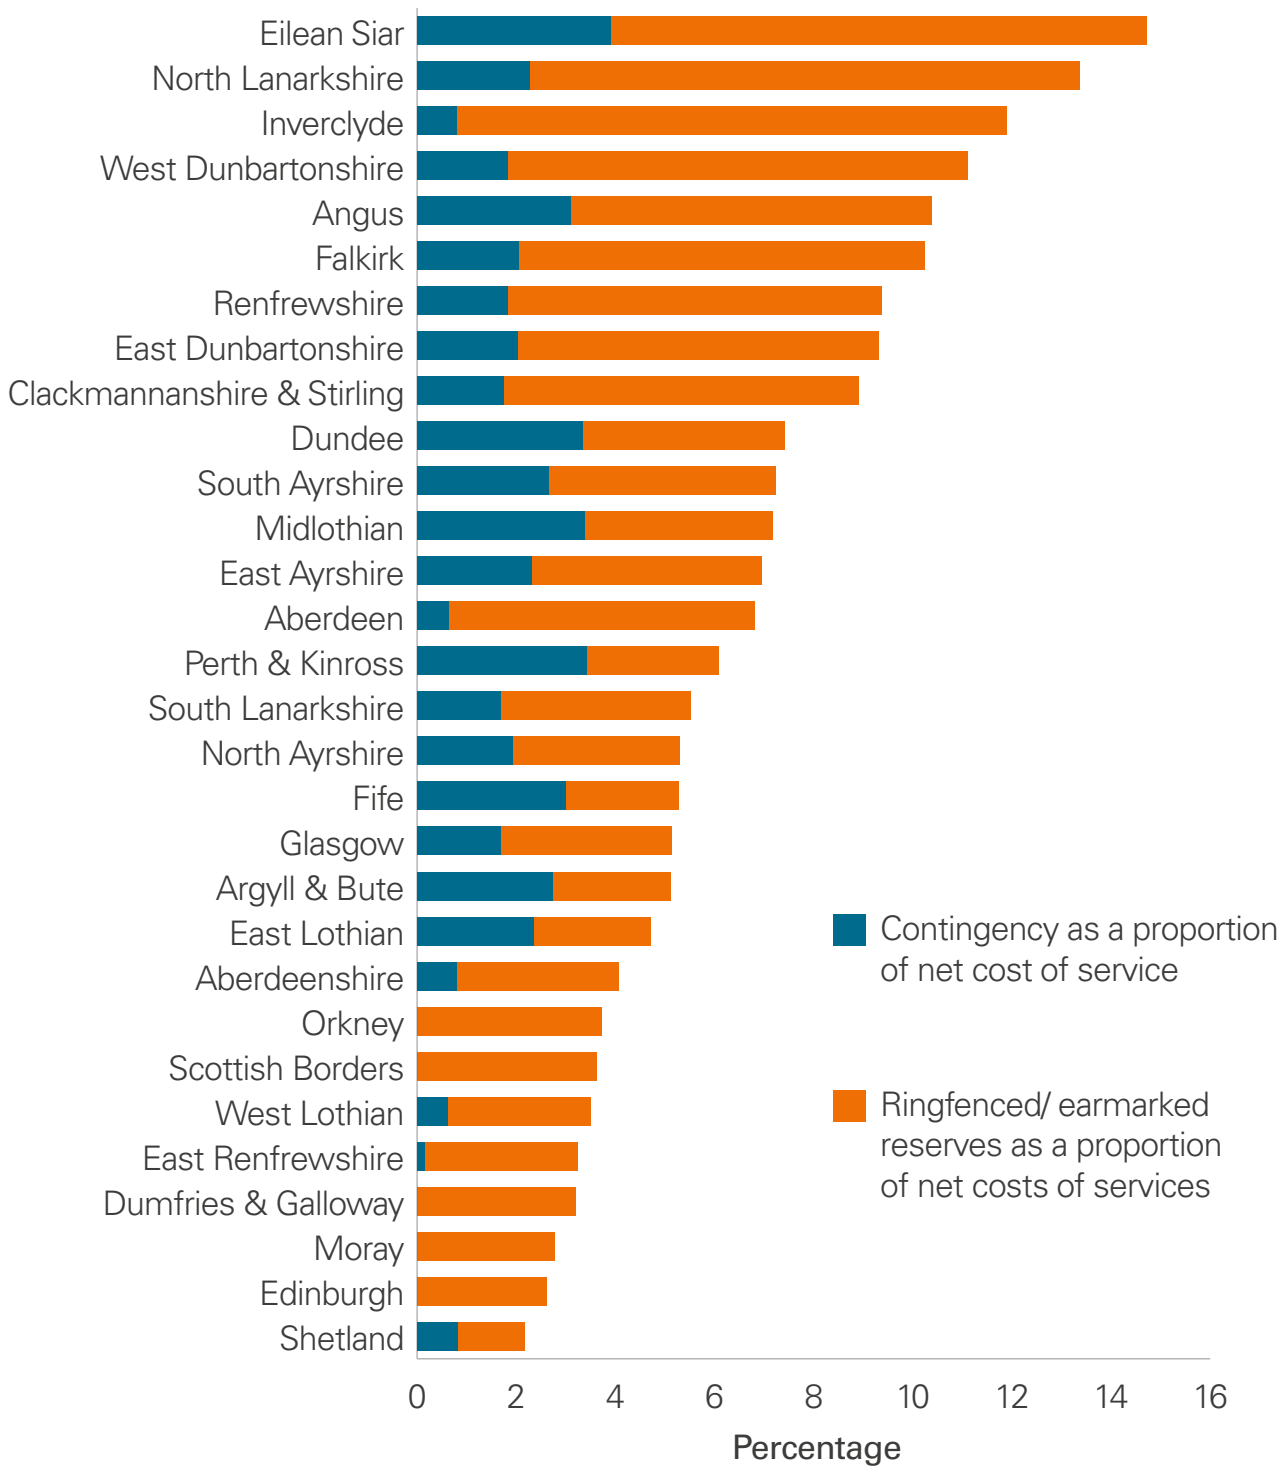

39. Reserves ring-fenced to support Scottish Government national policy objectives saw a 57 per cent reduction of £106 million to £79 million. These national initiatives include programmes for primary care improvement and mental health programmes.

40. These reserve balances largely represent non-recurring amounts of money that can only be used for specific and defined national policy priorities. As these non-recurring reserves are utilised, funding will need to be identified to fund any continuing associated initiatives on a sustainable basis.

41. The reduction in reserves was slightly offset by increases in the contingency reserves and other locally earmarked reserves. Contingency reserves have continued to increase, largely as a result of unplanned vacancy savings, and now represent a quarter of the total year end reserves balance.

Exhibit 5.

Year end IJB reserves as a proportion of net cost of services

Source: IJB audited annual accounts 2022/23

42. Contingency reserves are uncommitted funds held by IJBs to mitigate the financial impact of unforeseen circumstances and the amount held will vary depending on individual IJB reserve policies. A review of a sample of ten IJB reserve policies showed that the majority (eight) had a contingency reserve target of two per cent of annually budgeted expenditure. There is no statutory maximum or minimum level of contingency reserves.

43. Seventeen IJBs reported an increase in their contingency reserves leading to a net increase of 24 per cent (£35 million) to £183 million between 2021/22 and 2022/23. Across the IJBs, contingency reserves, as a proportion of the net cost of services, ranged from zero per cent to four per cent ([Exhibit 5, page 20](#)). Two thirds of IJBs had contingency reserve levels of over two per cent of the net cost of services. Five IJBs had no contingency reserves.

The projected financial position is set to worsen

44. Twenty five IJBs agreed their 2023/24 budget before the start of the financial year. Delays in the agreement of savings plans and uncertainty around NHS partner funding were the most common reasons for IJBs not agreeing a balanced budgets before the start of the financial year.

45. IJBs do not always receive notification of funding allocations from NHS boards before the start of the financial year. This adversely affects the IJBs' ability to plan expenditure, can cause delays to decision-making and lead to vacancies being held unfilled due to uncertainty over funding.

46. The projected funding gap for 2023/24 has almost tripled in comparison to the previous year. All IJBs reported an increase in their projected funding gap with the exception of Orkney IJB. The 2023/24 projected funding gap was £357 million representing a 187 per cent increase from the 2022/23 projected funding gap (£124 million). Funding gaps, as a proportion of the 2022/23 net cost of services, ranged from one to ten per cent ([Exhibit 6, page 22](#)).

Exhibit 6.

Funding gap as a proportion of net cost of service

Source: Auditor data return

47. Of the total funding gap, 53 per cent (57 per cent in 2021/22) is anticipated to be met by identified savings, 24 per cent from the use of reserves, with actions yet to be identified to bridge the remaining gap [Exhibit 7](#).

Exhibit 7.

2023/24 IJB funding gap planned action

Source: Auditor data return

The increasing reliance on non-recurring sources of income is not sustainable

48. At the time of the 2023/24 budget setting, over a third of the projected funding gap was anticipated to be bridged by one-off sources of funding, ie on a non-recurring basis. A quarter of the projected funding gap was planned to be bridged by the use of non-recurring reserves and a further fifth of the identified savings were anticipated to be non-recurring.

49. In addition, a significant proportion of the funding gap did not have planned savings action agreed against it at the time of budget setting. These unidentified savings made up 16 per cent of the total projected funding gap and were the result of eight IJBs not starting the 2023/24 financial year with a balanced budget.

50. The increased reliance on non-recurring sources of income to fund recurring budget pressures is unsustainable in the medium to long term. The identification and delivery of recurring savings and a reduced reliance on drawing from reserves to fund revenue expenditure will be key to ensuring long-term financial sustainability.

Financial sustainability risks have been identified by auditors in the vast majority of IJBs

51. Auditors identified financial sustainability risks for 80 per cent of IJBs as part of their 2022/23 audits. Findings suggested that there was a reliance on non-recurring savings and sources of income to achieve financial balance.

52. As recurring savings get more difficult to identify and achieve, the need for a more significant transformation of services, in order to achieve financial sustainability, becomes more important.

53. IJBs are currently facing a range of significant and growing challenges and uncertainties impacting financial sustainability and service provision, including:

- uncertainty around the level and terms of future funding settlements and funding allocations for specific initiatives
- significant recruitment and retention challenges, both with the IJB and partner bodies and with external providers in the sector
- rising demand and increasing complexity of care arising from the demographic challenges of an ageing population
- cost-of-living crisis and inflationary cost pressures, including prescribing costs, making it more expensive to maintain the same level of services

- ongoing legacy cost impacts of Covid-19, including vaccination programmes, testing and Personal Protective Equipment costs.

54. An initial analysis of 2024/25 budget setting reveals that the projected funding gap for IJBs has increased again to £456 million. This increase underlines the importance of IJB board members having clear and frank conversations not only at the board level, but with partners, providers and the wider public, about the decisions that will be required to achieve future savings and the likely implication these decisions will have on the services individuals currently receive.

Medium-Term Financial Plans need to be updated to reflect all cost pressures currently known

55. The majority of IJBs have an up to date Medium-Term Financial Plan in place, but auditors found a third needed to update their plan. It is essential that IJBs ensure Medium-Term Financial Plans are updated, reflecting all known and foreseeable costs, to allow informed decision-making on the delivery of sustainable service provision and reform in the future.

4. Performance

Data quality and availability is insufficient to fully assess the performance of IJBs, but national indicators show a general decline in performance and outcomes

Data quality and availability is insufficient to fully assess the performance of IJBs and inform actions to improve outcomes for service users with a lack of joint data across the system

56. The Public Bodies (Joint Working) (Scotland) Act 2014 sets out nine National Health and Wellbeing Outcomes. These seek to measure the impact that integration is having on people's lives. These national outcomes are underpinned by 23 associated national indicators, although four indicators have not been finalised for reporting. These national indicators have been developed from national data sources to provide consistency in measurement. IJBs are also encouraged to devise their own performance indicators for their area. Each IJB produces an annual performance report which sets out publicly its performance against key performance indicators.

57. Our review of IJB annual performance reports for 2022/23 shows the majority report against the key national performance indicators. All set out performance against their own identified strategic priorities. Some IJBs have developed their own indicators, as suggested in the Act, to help demonstrate how they are working towards their strategic outcomes. This allows for flexibility in reporting on local performance but means that describing a comprehensive national picture of performance is not possible.

58. Published performance information is not always clearly linked to the National Health and Wellbeing Outcomes with some gaps in the completeness of national performance information. Nine of the national integration performance indicators are based on the biennial Health and Care Experience Survey (HACE). Response rates for the HACE are generally quite low, with more deprived areas experiencing the lowest response rates. This increases the risk that there may be underrepresentation of the experience of certain groups of people and areas.

The IJB Performance Supplement to this report sets out the performance of each IJB against the 19 national indicators available under the National Health and Wellbeing Outcomes.

59. In our engagement with stakeholders, we heard a consistent message that data is key to a whole system approach and performance management needs to be redefined to reflect this. They indicated a range of challenges around data that is currently collected:

- The current data does not provide good evidence on how the performance of one part of the system impacts on either other parts of the social care system or the system as a whole. This means the current performance data is of limited use in helping to inform system changes which might improve performance and deliver better long-term outcomes.
- There is too much emphasis on data that is used by individual organisations for their governance and operational purposes rather than the collective partnership focus on its priorities. Current arrangements do not reflect a 'whole-systems' approach to performance management and reporting.
- A lack of good data on primary care as it is voluntary for GP's to report.
- Data is more routinely collected and published on health services than social care services.

Work to improve the data sets is at an early stage but is progressing

60. Work is being carried out by the Scottish Government and Public Health Scotland to improve data and allow the comparison of performance including the development of the Care & Wellbeing dashboard. This was launched in November 2023 and is populated with management information and updated on a weekly basis. IJB chairs and chief officers have access to the system to monitor significant shifts in performance and anomalies in the data. The system is still in its early stages of development and use.

61. There are other resources that can be utilised to assist in the analysis of data. In our [Health and social care integration: update of progress](#) 2018 report we set out the existence of Local Intelligence Support Team (LIST) analysts. Using a LIST analyst to tailor and interpret local data helps IJBs to better understand local need and demand and to plan and target services.

62. There are also examples of individual IJBs starting to manage their data in more innovative ways, for example at Midlothian IJB.
[\(Case study 1, page 28\)](#)

Case study 1.

Midlothian IJB outcome mapping

Midlothian IJB coordinates health and social care support to nearly 97,000 people. To better understand how the IJB contributes to personal outcomes for people, it asked all Midlothian HSCP services to track their contribution to improving outcomes using an outcome mapping approach by January 2024.

Outcome mapping is a way to understand how services contribute to people achieving the outcomes that matter to them and can help services make more targeted, locally informed decisions about how to design, deliver or commission services. This approach allows them to describe what they do, who with, what people learn and gain as a result, how this makes them feel and the difference this makes in their lives. The outcome mapping approach was developed by 'a Scottish software and consultancy company in partnership with the Midlothian HSCP Planning and Performance team.

Each 'stepping-stone' of the outcome map framework includes a set of success criteria aligned to the Care Inspectorate joint inspection framework. The outcome map is colour-coded to show an evaluation of the extent to which the service is making progress towards personal outcomes and confidence in how strong the evidence is to support that progress rating. This results in a two-factor rating system for each 'stepping-stone' in the outcome map.

The IJB also uses outcome mapping and has developed a Strategic Commissioning Map that provides a real-time picture of the whole system progress towards their strategic aims and the nine National Health and Wellbeing Outcomes by linking to service outcome maps.

Outcome mapping is now central to performance measurement in the planning and performance teams. It is part of the triangulation of three types of data: service activity, population experience, and personal outcomes. The information collected from each of these three areas together provides objective, whole system evidence that supports services to develop meaningful action plans for change.

Currently 60 per cent of service areas are using the framework. Some services are using this system to articulate, record, examine, and evaluate service provision and actively using this tool to support service redesign. Resourcing pressures continue to present challenges for some areas to find the time and space to complete a first map and a programme of targeted support is in place to help those areas with the most significant delivery pressures.

The partnership has shared this work with Healthcare Improvement Scotland (HIS), the Scottish Government team developing the National Improvement Framework for Adult Social Care and Community Health and most recently the team developing a new improvement framework for health that will support person centred care.

Source: Midlothian HSCP

Available national indicators show a general decline in performance and outcomes for people using social care and primary and community healthcare services

63. As set out in the thematic sections below (and in the performance information supplement) there is a general decline in performance against the national indicators.

64. The following sections draw out performance findings against key themes set out in the bullet points below. Alongside nationally available data, for each theme we also describe the context and challenges. Some case studies of examples are also set out in [Appendix 1 \(page 50\)](#). These illustrate examples of where IJBs are using or developing different working practice to improve performance and outcomes.

- Theme 1 – Prevention and early intervention
- Theme 2 – Shifting the balance of care
- Theme 3 – Person-centred care/choice and control
- Theme 4 – Reducing inequalities
- Theme 5 – Unpaid carers/community resilience.

Theme 1 Indicators – Prevention and early intervention

Collaborative, preventative and person-centred working is shrinking at a time when it is most needed. Instead of a focus on care at the right place at the right time, there is a shift to reactive services with little capacity to invest in early intervention and prevention.

65. Addressing individuals' health and social care needs at an earlier stage through prevention and early intervention promotes better outcomes for individuals, improving their quality of life and independence, and reduces the need for costly support and care later on. The 2021 Independent Review of Adult Social Care in Scotland (Feeley Review) set out the need for an increased focus on preventative, early intervention and anticipatory forms of support and a shift away from a crisis intervention. However, this is difficult to progress when the pressures on services are so acute.

66. As financial pressures have increased, eligibility criteria for individuals accessing social care services have tightened. With this, opportunities to undertake prevention and early intervention focused services have decreased. IJBs and their partner bodies have instead signposted less formalised support in the community, often provided by third and voluntary sector organisations. However, we have found that the financial challenges are leading IJBs and other funding bodies such as NHS boards and councils to reduce grant funding to these service providers reducing the capacity to meet and address these lower level, often more preventative focused needs.

67. Leaving lower-level health and social care needs unaddressed until they become more significant tends to lead to increased complexity of need, the requirement for a more resource intensive intervention and less positive outcomes for individuals in the longer term. It is essential that IJBs and their partner bodies find ways to protect and increase the health and social care interventions at an earlier stage. This will be key to addressing future demand pressures arising from demographic shifts to an older population in a more financially sustainable manner.

68. How well individuals consider themselves able to look after their health is indicative of the IJBs' and partner bodies' effectiveness in addressing and supporting individual needs to sustain healthy lives in the community. Since 2013/14, there has been a deterioration by four percentage points of adults who are able to look after their health either 'very well' or 'quite well' [Exhibit 8](#). All the IJBs recorded a reduction in this measure over the period 2013/14 to 2022/23. Fourteen IJBs saw a reduction greater than average over this period, with three IJBs recording a reduction greater than five percentage points.

Exhibit 8.

Theme 1 indicators

Source: Core Suite of Integration Indicators, Public Health Scotland

Exhibit 9.

Theme 1 indicators

Source: Core Suite of Integration Indicators, Public Health Scotland

69. Emergency admissions rate and the emergency bed day rate are often used as indicators of how well IJBs are reducing unnecessary hospital stays and situations where individuals remain in hospital while they are deemed to be fit enough to return to a more community-based setting.

70. Positively, there has been an eight per cent reduction in the emergency admissions rate as well as a five per cent reduction in the emergency bed day rate since 2016/17. Compared to 2020/21 there is an 16 per cent increase in the emergency bed day rate, however this reflects the impact of the Covid-19 pandemic [Exhibit 9](#).

71. Eighteen IJBs recorded a reduction in emergency bed day rate over the period 2016/17 to 2022/23 [Exhibit 9](#). Of the twelve that recorded an increase, two IJBs record an increase of over 10 per cent.

72. Some IJBs have put in place schemes and plans and maintain early intervention and prevention services. For example, Aberdeen City have set up a listening service to offer first-level support for people with low-level mental health challenges, addressing issues such as bereavement, redundancy, and life changes that can impact overall wellbeing. In Fife, a text chat service was launched in November 2022 enabling young people aged 12 to 19 to have direct, confidential access to the school nursing service. Further examples are set out in [Appendix 1 \(page 50\)](#).

Theme 2 Indicators – Shifting the balance of care

There is a recognition by the Scottish Government, councils and NHS boards that the balance of care needs to shift out of hospital to the community. Although this was the intention of the creation of IJBs, we have not seen significant evidence of this happening.

73. Part of the aims of the integration of health and social care was to help shift resources away from the institutional settings, such as hospitals and residential care institutions, and into more community-based services. The rationale for this is that, alongside it often being a more cost-effective way of providing services, it also helps promote greater independence and improved outcomes for the individual.

74. There has been an increase in the provision of services in the community, with an increase in the percentage of adults with intensive care needs receiving care at home and in the proportion of end-of-life care provided at home or in a community setting. At the same time, the percentage of expenditure on institutional and community-based Adult Social Care services has largely remained static with a small increase in the proportion spent on accommodation-based services.

75. Indicators tracking the balance of care and provision of services in the community have largely shown an increase in the number of individuals receiving care at home or in the community. However, these changes are marginal when viewed over the period since the inception of health and social care integration in 2015. There are also indications of pressures impacting the access to community-based services and the capacity of community services ([Exhibit 10, page 33](#)).

Exhibit 10.

Theme 2 indicators

Source: Core Suite of Integration Indicators, Public Health Scotland

76. At the same time there has been a deterioration in the experience of those receiving those services in the community nationally [Exhibit 11](#).

Exhibit 11.

Theme 2 indicators

Source: Core Suite of Integration Indicators, Public Health Scotland

77. The Auditor General for Scotland [NHS in Scotland 2023](#) report states that 'lack of social care capacity remains an obstacle to improving patient flow and reducing the number of delayed discharges from hospital. This is supported by data showing that many patients whose discharge is delayed are awaiting the completion of care arrangements to allow them to live in their own home (awaiting social care support), waiting for a place in a nursing home, or awaiting the completion of a post-hospital social care assessment'.

78. Examples of approaches to shift the balance of care from the hospital to community settings are set out in [Appendix 1 \(page 50\)](#).

Theme 3 Indicators – Person-centred care: choice and control

The amount of choice and control service users feel they have is variable across the country

79. In 2010, the Scottish Government and COSLA set out a ten-year self-directed support (SDS) strategy with the aim of supporting people's right to direct their own social care support. The Social Care (Self-directed Support) (Scotland) Act 2013 was part of the SDS strategy and set out how councils should offer people options for how their social care is managed.¹²

80. The Scottish Government, IJBs, councils, providers and service users and their carers recognise the gap between what the SDS legislation is designed to do and what is happening for people trying to access services in parts of Scotland. While there are examples of people being supported in effective ways through SDS, not everyone is getting the choice and control envisaged through the strategy. Some people who use services feel they have a lack of choice and need to accept what is offered with the type of care they receive being driven by the service provider. This is most recently evidenced in the Scottish Parliament's Health, Social Care and Sport Committee post-legislative scrutiny of the Self-directed Support (Scotland) Act 2013 phase 1 report.¹³ Examples of increased flexibility, choice and control were given for both individuals and unpaid carers but the Committee also reflected that many areas of improvement are required. For example, a need to improve the consistency of implementation between councils and improve clarity and knowledge around SDS by providing more support and guidance to navigate the process.

81. People who use services and their carers highlight issues accessing services. Either the times at which services are available is unsuitable or the process required to access them is overly complicated. Service users also highlighted a lack of coordination and communication between services, often having to repeat their symptoms or issues multiple times as they move from service to service. Poor data sharing was highlighted as a contributing factor.

82. People who use services described being put to bed at 2pm or left in bed for hours at a time during the day. This was largely attributed to care services being under-resourced and care workers having to schedule their day to fit in additional people.

83. Research¹⁴ has found that while those who received SDS generally had positive experiences and found it beneficial, more than one-quarter of people who use SDS had their option chosen by someone else.

84. The percentage of people who are receiving social care support through SDS is increasing, estimated at 88.5 per cent in 2021/22, up from 77.1 per cent in 2017/18.

Exhibit 12.

Percentage of adults supported at home who agree that they had a say in how their help, care or support was provided

Source: Core Suite of Integration Indicators, Public Health Scotland

85. In general, there has been a deterioration in the proportion of adults who felt that they had a say in how their care is provided [Exhibit 12](#). The latest year of data (for 2023/24) shows that 60 per cent of adults supported at home who disagreed that they had a say in how their help, care or support was provided. Due to how the data is collected this data is not comparable to previous years.

86. The Care Inspectorate amended their approach to inspections of care services in response to the Covid-19 pandemic. Inspection activity was shifted to focus on services where there were concerns or intelligence suggesting that they are a higher risk. The overall trend since 2020/21 has seen a reduction in the number of care services graded as either 'good' or better [Exhibit 13](#).

Exhibit 13.

Proportion of care services graded 'good' (4) or better in Care Inspectorate inspections

Source: Core Suite of Integration Indicators, Public Health Scotland

87. There is limited national data on access to GPs. (The Auditor General for Scotland's upcoming report on the General Medical Services contract will look further at the availability and quality of data.) However, the percentage of people reporting a positive experience of care at their GP practice between 2015/16 and 2023/24 has declined by 17 points [Exhibit 14](#). There has been a decline across all IJBs and the gap between the best and worst performing areas has widened.

88. Some examples of IJBs working with partners to intervene to give people more choice and control and feedback on the services they receive are set out in [Appendix 1 \(page 50\)](#).

Exhibit 14.

Percentage of people with positive experience of care at their GP practice

Source: Core Suite of Integration Indicators, Public Health Scotland

Theme 4 Indicators – Reducing inequalities

The Covid-19 pandemic has exacerbated existing inequalities

89. A recent review¹⁵ of health inequalities found that the health of people living in Scotland's most deprived areas is not keeping up with the rest of society. The health inequality gap is widening, evident through increased drug deaths, infant mortality and a fall in life expectancy in more deprived areas. People living in deprived areas have a significantly lower healthy life expectancy, 26 years less for males and 25 for females in the most deprived decile compared to the least deprived decile. This gap has been widening over the past decade.¹⁶

90. Research has found people who access social care, unpaid carers and those who work in the social care sector have been disproportionately impacted (both directly and indirectly) by the Covid-19 pandemic and mitigation measures.¹⁷ The review also highlights that some groups could experience multiple and compounding inequalities. There is a risk that equality groups and people most at risk of having their human rights breached are set back by changes to and reductions in service provision, particularly as finances become tighter.

91. Respondents to a survey about their experiences of social care¹⁸ who did not receive support but felt they needed it, were proportionally more likely to be non-white, disabled, living in deprived areas, LGBO (lesbian, gay, bisexual, other) and unpaid carers.

The premature mortality rate is increasing with rates higher in more urban and more deprived areas

92. The premature mortality rate is increasing across Scotland [Exhibit 15](#) with a one per cent increase between 2016 and 2022.

Exhibit 15. Theme 4 indicator

Source: Core Suite of Integration Indicators, Public Health Scotland

93. IJBs were found to have consistently lower rates of premature mortality in areas that were more rural and/or relatively more affluent. Five IJBs, all from more urban and less affluent areas (Dundee, Glasgow City, Inverclyde, North Lanarkshire, West Dunbartonshire), have consistently had relatively high premature mortality rates.

Emergency bed day rates are greater in areas with higher levels of deprivation

94. There is a clear relationship between the emergency bed day rate and the deprivation and affluence of an area. Using the Improvement Service's **family groupings of IJB** areas, shows that areas with higher levels of deprivation have higher levels of emergency day bed rates than areas that are more affluent [Exhibit 16](#).

Family groups are groupings of IJBs that are similar in the type of population they serve (deprivation and affluence levels) as well as the type of area they serve (rural, semi-rural and urban).

Exhibit 16.

Emergency bed day rate (per 100,000 population): Difference to Scottish rate

Note: Grouping 1 represents the least deprived/affluent IJB areas and grouping 4 represents the most deprived/affluent

Source: Core Suite of Integration Indicators, Public Health Scotland, Improvement Service (deprivation and affluence grouping)

95. Example case studies in [Appendix 1 \(page 50\)](#) set out some programmes IJBs have in place to tackle inequalities in their communities and improve outcomes for all.

Theme 5 Indicators – Unpaid carers

The reliance on unpaid carers is increasing as the social care workforce is under added pressure

96. There is an enormous reliance on unpaid carers to support the social care system. These carers provide support to friends or family who need it. Carers can claim an allowance of £81.90 a week if they care for someone at least 35 hours a week. An additional carer support payment of £288.60 twice a year is also available to some carers. Although the exact number of unpaid carers is not known, as many carers don't identify themselves as such, there are an estimated 800,000 unpaid carers in Scotland; this includes 30,000 young carers under the age of 18.¹⁹ The social care system relies on the contribution of the community and unpaid carers with the value of unpaid care estimated at £36 billion a year in Scotland.²⁰ The Feeley Review stated that 'The role communities play in supporting adults to remain active in their community simply cannot be overstated.'²¹

97. This reliance on unpaid carers is increasing as the social care paid workforce is under increased pressure. This is unsustainable.

98. Carers are feeling the mental, physical and financial pressure of a system under strain. Carers Scotland's latest State of Caring survey²² found that over half (54 per cent) of carers said that their physical health had suffered because of their caring role, with one in five (20 per cent) suffering a physical injury from caring. Forty-four per cent of those on Carers Allowance are cutting back on food and heating. Research²³ carried out by the Carers Trust on the experience of older carers found:

- 80 per cent said their physical health had been affected by their caring role
- 87 per cent said their mental health and wellbeing had been affected by their caring role
- 82 per cent felt as though their caring role has financially affected them; 37 per cent have used less gas and electricity in their homes as a way to save money, and 19 per cent have skipped meals in the past 12 months
- 46 per cent of carers had missed some form of health appointment due to their caring role. This will have knock effects for the efficiency of the health service.

Exhibit 17.

Theme 5 indicator

Source: Core Suite of Integration Indicators, Public Health Scotland

99. Caring responsibilities fall disproportionately on women, people living in rural areas and people living in deprived areas. National indicators also illustrate the declining sense of wellbeing for unpaid carers and those needing care [Exhibit 17](#). There are provisions in the NCS Bill to improve support to unpaid carers but this has been subject to ongoing delays.

100. Some IJBs have set up interventions to support unpaid carers such as Falkirk and Clackmannanshire Carers Centre who provide information and signposting to those who are assessed as low or moderate on the unpaid carers eligibility for support.

5. Commissioning and procurement

Commissioning and procurement practices for social care services continue to be largely driven by budgets, competition, and cost rather than outcomes for people. Improvements to commissioning and procurement arrangements have been slow to progress but are developing

101. Our 2022 [Social Care briefing](#) highlighted commissioning arrangements as a key issue stating: 'Commissioning tends to focus on cost rather than quality or outcomes. Current commissioning and procurement procedures have led to competition at the expense of collaboration and quality.' In this section of this report, we focus on this issue and consider what progress is being made.

What are commissioning and procurement?

102. Commissioning identifies what is to be provided. It is the process each IJB uses to set out to its partner councils and NHS boards, what it requires them to provide to meet its strategic plan for social care and primary and community health services, based on population needs and available budgets. Procurement establishes how and who will provide the services. It is the process of contracting or purchasing specific services to meet those requirements. The IJBs do not procure the services. This is done by the relevant councils or the NHS and can be from the public, private and third sector. Scotland Excel assists some councils in procuring services and has developed national adult social care frameworks. Currently, the private sector provide 54 per cent of social care services, 24 per cent by councils, 21 per cent by the third sector and the remaining element (one per cent) by health boards.^{[24](#)}

103. All IJBs have integration strategic commissioning plans. The 2014 Act sets out requirements for the plans that are also supported by Scottish Government guidance issued in 2015.^{[25](#)} The plans are required to:

- be reviewed at least every three years
- set out what the arrangements are to carry out the tasks of the IJB over the three years

- divide the area geographically into at least two localities for setting out these arrangements with each locality done separately
- include how the arrangements are intended to contribute to achieving the national health and wellbeing outcomes.

104. The commissioning of social care and primary and community health services is a cyclical process carried out by a Strategic Planning Group for each IJB. This group must consider the outcomes for people and how the needs and availability of services change. Healthcare Improvement Scotland and the Care Inspectorate have produced a quality framework²⁶ to evaluate the effectiveness of strategic planning.

105. The Independent Review of Adult Social Care in Scotland, considered in detail the arrangements for commissioning and procuring social care services in Scotland. The review identified ten changes needed in commissioning and procurement practices.

Improvements to commissioning and procurement arrangements have been slow, with cost rather than outcomes driving decision-making

106. Commissioning and procurement decisions are currently driven largely by achieving the range and volume of services required at the lowest cost. This is understandable given the financial pressures and increased demand faced by IJBs, but the pressure on the service providers to remain competitive can reinforce a focus on driving down prices. This can be at the cost of promoting service quality, equality, innovation and collaboration with others, to improve people's outcomes.

107. Tenders for support packages for people are often constructed around time and task of the service, rather than the outcomes. This lack of flexibility in the system means that NHS and council resources can get tied up in providing services that aren't effective in improving outcomes. More flexibility is needed across the system.

108. The cyclical nature of the commissioning and procurement, mean that time and resource are focused on contracts renewal processes instead of a more strategic long-term approach.

109. As set out at [paragraph 25](#), the current model of governance is complicated. This can cause difficulties when trying to commission services in a collaborative way. All stakeholders, including providers and users need to be part the strategic commissioning process in order to reflect what people need and want. This current approach also does not fully allow for innovation of the sector in finding solutions.

110. The current commissioning and procurement system lacks a process of accountability when people do not receive the services they need. People have described the process of accessing social care as

'notoriously difficult' and 'over-complicated' and needing to 'fight for' and 'justify' their support where they had a negative experience.²⁷

Current commissioning and procurement practices are a risk for the sustainability of service providers and the workforce

111. Current arrangements are heavily reliant on a stable provider market and workforce but there are exacerbating financial and workforce issues facing providers, risking the viability of some.

112. A consequence of the current cyclical commissioning and procurement arrangements is that many risks around the effective delivery of service are largely put onto the providers. For example, where the cost of energy makes a service more expensive to deliver than the contract provides for, the provider is still required to provide the service, bearing the loss.

113. There is uncertainty for all providers, particularly in the third sector around future funding and their role in service provision. Providers are also experiencing challenges with providing services and fulfilling contracts largely due to difficulties with workforce recruitment and retention:

- Private and third sector providers find that council commissioning rates are not enough to deliver social care and support and residential, personal and nursing care, and pay expenses such as staff, training and overheads. These providers say they cannot compete with councils where pay and terms and conditions are better than they can provide due to the flat cash settlement local government receives from the Scottish Government.
- Non-committal framework agreements leading to zero hours or short hour contracts for staff.
- Contracts that do not cover travel costs, especially challenging in rural Scotland which were particularly badly affected by fuel price rises.
- Growth in split shifts and reduction in paid sleepovers for staff.
- Although there has been an uplift in adult social care workers' wages, this has not been universally applied for all social care workers as some roles have been out of scope for the intended policy outcome. This has focused on uprating pay for those on the lowest incomes. There is no equivalent uplift for those with supervisor or manager roles making these positions less desirable.
- High levels of overtime and agency costs.
- High and ongoing recruitment costs, particularly in more rural areas.

114. Local government have been calling for multi-year funding settlements from the Scottish Government to support providers with medium- to long-term planning. This is currently being discussed through the Verity House Agreement and the fiscal framework discussions.

115. As set out in the context section, the workforce feel undervalued in the system and there are unprecedented numbers of vacancies ([paragraph 19](#)). The **Fair Work** Convention Report²⁸ set out that 'Despite some good practice and efforts by individual employers, the wider funding and commissioning system makes it almost impossible for providers to offer fair work.' Without urgent progress on the fair working agenda nationally it is likely that the risks to the sustainability of the sector will deepen.

Fair work is work that offers all individuals an effective voice, opportunity, security, fulfilment and respect. It balances the rights and responsibilities of employers and workers.

Current commissioning and procurement practices are not always delivering improved outcomes for people

116. People who use services are often not involved in commissioning and procurement processes and therefore services are not necessarily reflective of what people need and want. The Independent Review of Adult Social Care in Scotland²⁹ reported that commissioning using generic frameworks based on an hourly rate does not work well for people who have fluctuating needs for support, particularly support for mental health.

117. The Self-directed Support (Scotland) Act 2013 was designed to ensure people had choice and control in how their social care support is provided. As highlighted at [paragraph 80](#), there is a recognised implementation gap in this policy. The Scottish Parliament's Health, Social Care and Sport Committee post-legislative scrutiny of the Act has highlighted concerns around commissioning in relation to SDS including:

- the importance of facilitating collaborative commissioning conversations
- a need to develop a marketplace of providers
- a need to end competitive tendering and restrictive procurement processes
- the disparity in the relative available funding under different SDS options.

There is an increasing desire to move towards more ethical and collaborative commissioning models but it has not yet been universally adopted

118. There are examples of IJBs attempting to adopt collaborative and **ethical commissioning** processes in their strategies but these appear to be at an early stage. Almost a third of IJBs have adopted the Unison Ethical Charter for Social Care Commissioning³⁰ which is based on ethical commissioning principles.

119. IJBs are reaching out for support from IRISS (Institute for Research and Innovation in Social Services) in collaborative commissioning, for example work to improve outcomes-based commissioning with East Dunbartonshire, East Ayrshire and Orkney IJBs with Healthcare Improvement Scotland. IRISS has also been supporting West Dunbartonshire and North Ayrshire IJBs to change commissioning to a more collaborative approach. Both projects are at an early stage but they have highlighted that the relationship between stakeholders are a key aspect of addressing commissioning arrangements. Significant time and resource capacity is needed to work out these relationship issues.

120. There are some strong examples of how IJBs are working to commission in a more collaborative and flexible way including Aberdeen IJB and Fife IJB. Two examples are set out in [Appendix 1 \(page 50\)](#).

National approaches to improve commissioning have been slow to progress but are developing

121. Across stakeholders we have engaged with, there is a recognition that commissioning needs to improve. The Feeley Report recommended that the Scottish Government and COSLA develop and agree ethical commissioning principles and core requirements. This is happening through the development of the NCS Bill, an Adult Social Care Ethical Commissioning Working Group was set up (also including the Institute for Research and Innovation in Social Services (IRISS), Social Work Scotland (SWS) and the Coalition of Care and Support Providers in Scotland (CCPS)). This group is developing a framework for ethical commissioning and has identified nine ethical commissioning principles:

- Person-led care and support
- Outcomes-focused practices
- Human rights approach
- Full involvement of people with lived experience
- Fair working practices
- High-quality care and support
- Climate and circular economy

Ethical commissioning

aims to embed ethical standards into the commissioning and procurement process to ensure the process is around equity and quality for people, not just around efficiency and cost.

- Financial transparency, sustainable pricing and commercial viability
- Shared accountability.

122. Current Scottish Government plans are that the NCS Bill will include a clear and comprehensive definition of ethical commissioning, with a National Care Service Board³¹ providing national oversight, guidance and practical support.³²

Endnotes

- 1 Lead Agency model - In Highland the NHS Board and council have adopted a different model for integration, a lead agency model. NHS Highland leads on adult services and Highland Council leads on children's services. Therefore, there is no Integrated Joint Board but an Integration Joint Monitoring Committee to monitor the planning and delivery of services. Revisions to the National Care Service Bill currently being developed, propose that Highland adopt a reformed IJB model as these are implemented.

- 11 Local Government Benchmarking Framework, Improvement Service, February 2024
- 12 Self-directed support (SDS) aims to improve the lives of people with social care needs by empowering them to be equal partners in decisions about their care and support. Four fundamental principles of SDS are built into legislation – participation and dignity, involvement, informed choice and collaboration. The Social Care (Self-directed Support) (Scotland) Act 2013 gave councils responsibility, from April 2014 onwards, for offering people four options for how their social care is managed:
 - Option 1: The individual or carer chooses and arranges the support and manages the budget as a direct payment.
 - Option 2: The individual chooses the support and the authority or other organisation arranges the chosen support and manages the budget.
 - Option 3: The authority chooses and arranges the support.
 - Option 4: A mixture of options 1, 2 and 3.

Appendix 1

Case studies

These case studies set out some examples of where integrated joint boards are using or developing different working practice to improve performance and outcomes.

Case study 2. Early intervention and prevention services

Preventing Frailty by Improving Nutrition (Shetland)

People providing care and support have an important role in recognising risk and preventing malnutrition. A project in the summer of 2022 led by the dietetics department in collaboration with Shetland residential teams including social care workers, seniors, care home cooks and care at home staff in the community. The project included reviewing dietetic patients care, menu and mealtime observations and advice, training needs analysis and delivery of MUST (Malnutrition Universal Screening Tool) training.

The IJB reported that confidence in ability to screen for malnutrition, provide nutrition advice and care, and actioning nutritional care plans was considerably increased following training, which was provided to more than 100 staff across Shetland.

Whole Family Wellbeing Funding programme (national scheme)

The Whole Family Wellbeing Funding (WFWF) is a £500 million Scottish Government investment in preventative whole family support measures. The aims of the fund are to support the change that is necessary for reducing the need for crisis interventions in families, and to move investment towards early intervention and prevention. The scheme is funded nationally from 2022 to 2026 with any new systems or services funded locally after that period.

The programme is split into three parts:

- to provide direct support to Children's Services Planning Partnerships (CSPPs) to help expand and deliver whole family support services as well as support transformational change
- to support local transformation through National Support for Local Delivery
- support projects that take a cross Scottish Government approach to system change which progress the aims of WFWF.

An evaluation report of year one funding of the first two parts reports that substantial progress has been made so far across most CSPPs. However, they have found it difficult to achieve the pace of progress envisaged by the Scottish Government in year one of the funding.

In South Lanarkshire, the funding has enabled the recruitment of peer support workers with lived experience who are able to reduce the stigma of needing support. The funding also enabled the creation of a team of early years staff, based in NHS Lanarkshire, that will give support to families that have children under the age of five. In addition, the funding enabled the expansion of Pathfinders, a school-based family project that aims to reduce the need for later intervention.

The funding has supported North Ayrshire to add two further locations to their Family Centred Wellbeing Service. The fund has also seen the expansion of North Ayrshire's Health Visiting Team, which aims to support early intervention and prevention for children by working with the whole family.

Case study 3.

IJBs shifting the balance of care

Home First Response Service (Glasgow)

Glasgow's Home First Response Service has the aim of ensuring frail people spend less time in hospital. The service is community led and made of multi-disciplinary frailty teams. Each team is led by advanced frailty practitioners based in hospitals with 26 now in post following a successful pilot of the service.

One in three people identified during the pilot were discharged the same day with a care plan having been put in place.

To enable fast access to the community services needed to move frail people out of hospitals and back home, the service uses a hub and spoke service model with each of the six Health Partnerships in Glasgow having their own frailty teams.

The teams liaise with other healthcare colleagues in the community including advanced nurse practitioners, pharmacists and allied health practitioners. This ensures that people receive the same level of care that they would in a hospital setting.

The Home First Response Service has been achieving, on average, a 50 per cent early turnaround rate per month.

Integrated Discharge Hub (West Lothian)

The West Lothian Integrated Discharge Hub (IDH) was set up in 2018 at St John's Hospital to improve delayed discharges and reduce the time it was taking make arrangements for people requiring care and support in the community following discharge from hospital.

To plan the safe and timely discharge of patients, an inter-agency team consisting of discharge coordinators, hospital social workers, Carers of West Lothian as well as inhouse care team staff work with patients and their families to plan their discharge and how their ongoing requirements will be met in the community.

Since the implementation of the discharge hub the IJB reports that improvements have been seen, with reduced lengths of stay, reduced occupied acute bed days, improved performance for days lost to delays in discharge and improved processes for interim placements when a patient is waiting for care home placement.

Between December 2022 and April 2023, the average number of days between a person being admitted to St John's Hospital and being identified as needing the support of the discharge hub has been reduced by 52 per cent. The length of stay for patients getting help from the discharge hub has also been reduced by 28 per cent during the same period.

The success of the discharge hub has drawn interest from other IJBs across Scotland.

The Joint Dementia Initiative (Falkirk)

The Joint Dementia Initiative (JDI) is a registered service in the Falkirk Health and Social Care Partnership. It has two main services: a one-to-one support service, which provides care and support at the user's own home, and a Home from Home service, which provides support to users in a group setting.

The JDI service aims to help people with dementia to continue to live the life they want to live by continuing to live at home in their own communities for as long as possible. This is delivered through meaningful engagement with service users, families, and key stakeholders from across Falkirk HSCP following a person-centred approach to the care provided.

A review of the JDI was carried out in April 2021 that included arranging engagement events with service users, their families, carers, staff, and stakeholders. The aim was to improve outcomes for families and carers and identify specific areas of concern and gaps in service delivery.

Identified as an important issue at the engagement events, the partnership looked at the flexibility of the service and dementia being a 24/7 illness. The partnership is working to provide evening and weekend support for families and carers, due to start in August 2024. These improvements would allow the partnership to achieve outcomes from their strategic plan.

A current project is being carried out to change Adult Placement Carers in the Home from Home service from self-employed to employees of the partnership. This change aims to improve recruitment and retention rates for the service.

The JDI has been successful in achieving funding from multiple funds including the Dementia Innovation Fund and the Carers Challenge Fund. This has allowed the Initiative to renovate their community space as well as create two part time support worker posts to help provide evening and weekend support to service users

Case study 4.

Choice and control

Community Brokerage Network (North and South Ayrshire)

The Community Brokerage Network is well established in the Ayrshires and provide brokers, who offer free independent information about self-directed support to people and their carers at any stage in their social care journey, whether they are entitled to a formal social care assessment or not. They have successfully connected people with services that have helped them achieve their personal outcomes in a way that works for them. [A Brokerage Framework for Scotland](#) has recently been produced by Self-directed Support Scotland and its partners to help encourage the use of this model further across Scotland.

Care Opinion (Falkirk)

Care Opinion is an online integrated platform where people can safely share their experience of any health service or Care Inspectorate-registered providers of adult social care services. Care Opinion has national scale and visibility and has worked with all Scottish health boards as well as ten HSCPs. Over 29,000 stories have been shared about health and social care services in Scotland on the Care Opinion platform.

Care Opinion enables Falkirk HSCP and the commissioned providers to use online feedback as one method of learning from lived experience. The aim is to drive forward quality service improvements, build a reputation for openness, to potentially avoid formal complaints, and develop a culture of transparency across the Partnership.

Case study 5.

Work to reduce inequalities

Welfare Advice & Health Partnerships (WAHPs) programme (Glasgow)

Scottish Government funding is enabling 84 GP Practices across the most deprived parts of Glasgow to host a dedicated welfare and health adviser one day per week. According to the Partnership this has had a positive impact on patient health, poverty and health inequalities, while also freeing up staff time for clinical care. In the last year, there have been 3,997 referrals made by WAHP practice staff across Glasgow, achieving a reported £3.3 million in financial gains and £1.1 million in debt managed for people.

eFRAILTY Power BI dashboard (West Lothian)

The eFRAILTY Power BI Dashboard was created with the aim to provide a snapshot of the make-up of frailty within the West Lothian population with the goal of identifying people who could benefit from help, improving the health inequality gap. The dashboard also has the aim of mapping frailty data by GP postcode to enable the targeting of resources.

The data in the dashboard uses the Rockwood clinical frailty score from patient and carer self-assessment forms. These forms are collected at vaccination centres each year during the patient's annual flu jab. The frailty data is collected by the vaccination nurses and then entered into GP systems before being extracted and used to populate the eFRAILTY dashboard.

The dashboard is still in the scoping and data-gathering phase, however the Partnership is looking at options for how to put the data to use. An example given by the Partnership for the use of the data was to refer patients graded as having mild frailty to their Xcite Exercise referral scheme.

Case study 6.

Granite Care Consortium

Established in October 2020, Granite Care Consortium (GCC) is composed of a mix of ten independent and third sector care providers delivering over 12,000 hours of care a week to more than 1,200 people.

GCC was set up with the aim of creating market stability, improving outcomes for service users and building a consistent trained and skilled workforce. Competitive methods of commissioning and procurement were identified as presenting a risk of providers reducing their services or exiting the market completely. Providers also often work in silos with little input or communication from other services.

Aberdeen City Health and Social Care Partnership (ACHSCP), commissioned GCC to take a collaborative approach, with a focus on the outcomes for the individual. This saw GCC move away from a 'time and task' model towards one built around the service user. The collaboration between providers allows different types of support to be added to a care plan without the need for time consuming reassessments.

For example, someone receiving mental health support who then required personal care could have this added to their care plan in a matter of hours.

Collaboration has also enabled greater data sharing and visibility. GCC use data at a local level as well as city wide to inform decision-making. A recent test of change has seen the introducing of hotspots allowing GCC to focus on where demand for care is greatest.

Funding is provided in monthly blocks by ACHSCP which allows GCC to flex individual care and support packages without the need for social worker authorisation. This speeds up the process, improving outcomes for individuals. The number of days those aged 75+ in Aberdeen City are waiting to be discharged from hospital (per 1,000 population) stands at 112 as of November 2023. This is down from 579 in 2019/20.

GCC faces the same workforce challenges as the wider sector but is using its outcomes focussed model as a positive tool to aid recruitment and retention. Learning and development is also a large part of the workforce strategy with GCC working in partnership with Robert Gordon University to develop new ways of delivering training.

I have felt partnership working between ACHSCP and GCC has been stronger than my previous experience before GCC – Social Worker

Building trust, both from ACHSCP and the ten partnering service providers, was crucial in delivering this model. Challenging traditional ways of working and thinking was acknowledged by GCC as difficult but it reports that there is now genuine trust between all parties and the culture of collaboration is now embedded within the consortium.

The Scottish Parliament Health, Social Care and Sport Committee have identified this work as a good model to provide the basis to develop best practice in ethical commissioning.

Case study 7.

Fife Care Collaborative

Established in 2021 the Care at Home Collaborative was a Collaborative of 16 Independent Care at Home Providers who delivered over 90 per cent of externally commissioned care at home services in the Fife IJB area. The Collaborative in June 2024 are now made up of 41 care at home Providers including Fife Council. The split between service delivery is approximately 30 per cent Council and 70 per cent Collaborative.

The aim of the collaborative is to involve all member organisations in active engagement and participation as well as to share best practice and lessons learned. The collaborative also aims to benefit from the economy of scale of working together, for example securing funding to maintain a higher weekend pay rate has helped the retention of staff.

One of the members of the collaborative, Cera Care, commented:

‘Since joining the Collaborative we have seen a dramatic improvement in the services we deliver as a whole in Fife. It has given us the opportunity to communicate with Scottish Care, Fife Council and External Providers together to input ideas and suggestions across to help each other and the people we care for.’

The collaborative makes use of a GPS tool called ‘Pin-Point’ which is a live dashboard of services used to manage commissioning. The IJB is able to manage capacity across the whole system by using monitoring and escalation systems that are connected to the collaborative.

A recent self-evaluation saw that previous recruitment and retention issues encountered by providers have been continuously improving and attributable to the success of the Collaborative.

Appendix 2

Methodology

Previous work

In [2022](#) and in [2023](#), the Accounts Commission published bulletins setting out the financial performance of IJBs. Together with the Auditor General for Scotland and Audit Scotland, we have reported more widely on the progress of health and social care integration and social care in Scotland. This includes reports in [2015](#) and [2018](#) setting out improvements needed by integration authorities. Our work in [2014](#) and [2017](#) set out the progress of the self-directed support legislation implementation and found while implementation was happening successfully in some areas, not everyone was getting the choice and control in their social care support envisaged in the legislation. In January 2022, a joint [Social Care briefing](#) set out the significant ongoing challenges impacting the delivery of social care services.

We aim to answer the following audit questions in this report:

- How well are IJBs responding to contextual challenges and improving their performance and the outcomes for people?
- How financially sustainable are IJBs and how are they responding to the financial challenges they face?
- How are IJBs using commissioning and procurement to improve performance and deliver improved outcomes in the lives of people who use social care services?

Our findings are based upon:

- the 2022/23 audited accounts and annual audit reports of IJBs and supplementary returns provided by appointed auditors
- the 2022/23 annual performance reports and Chief Social Work Officer reports of IJBs
- national data sets including core integration indicators and the Local Government Benchmarking Framework (LGBF)
- a review national reports and guidance
- a review of relevant published research
- interviews with key stakeholders including IJB chief officers and chief finance officers.

In February 2024, we hosted a roundtable discussion bringing together key stakeholders to consider the critical issues for IJBs and in particular

the provision of social care. The discussion covered immediate challenges as upcoming issues in the medium and long term. The discussion helped to inform this report and also identify future work for the Accounts Commission. The additional output sets out a summary of discussion.

Advisory Group

To support our work, an Advisory Panel was established to provide challenge and insight at key stages of the audit process. Members sat in an advisory capacity only and the content and conclusions of this report are the sole responsibility of Audit Scotland.

Members of the group included representatives from Health and Social Care Scotland, COSLA, Care Inspectorate, The ALLIANCE, Coalition of Care and Support Providers Scotland, Scottish Care and SPICe. We would like to thank them for their support.
